

# GOLDEN QUALITY

## Durable Raw Materials...

Northern maple wood is the best wood to use when building a lift chair. Our Maple wood is kiln dried to reduce moisture to only 4%. Northern maple wood is superior to oak because oak could split and crack more easily resulting in loud sounds and frustrating maintenance problems.

## Comfort and Style...

Lift chairs must have the appropriate level of the highest quality foam and fill. Foam must be able to hold up and support the distribution of weight to minimize muscle fatigue. At the same time, stylish long lasting fabrics are used to provide a soft comfortable feel.

## Craftsmanship...

How a product is built, defines how long the product will last. Each joint in our chair is double doweled and corner blocked with steel reinforcements. Wood and metal are separated with high strength plastic bushings and the springs are custom fit with "sound absorbent fabric" that virtually eliminates any noise allowing for smooth, quiet usage.

## Added Comfort and Safety...

Our chair construction provides stability through the use of rear landing legs which relieve the chair frame from added stress. All Northern Maple Wood is protected from contacting the metal frame through the use of a non-friction plastic. Adjustable feet with anti skid/scrape pads offer even more stability and support.

## Smart Engineering...

Smart engineering makes for a long product life resulting in your satisfaction. By wrapping the arm of the chair with high quality, long lasting protective foam, both the chair and the user are protected. By adding a thin strip of foam down the front of the chair, those "sharp" edges are covered, thus protecting the user.

Our chairs meet some of the toughest safety standards ever. Our **entire** chair meets ETL (Electrical Testing Lab) standards to ensure electrical safety. ETL is a nationally recognized, third party, testing facility.

New "Super Soft" Fiber for Utmost Comfort or High Density Block Foam for Extra Wides

Quick Release Hand Control

Widest Fabric Selection In Industry

10 Gauge Steel Scissor Mechanism

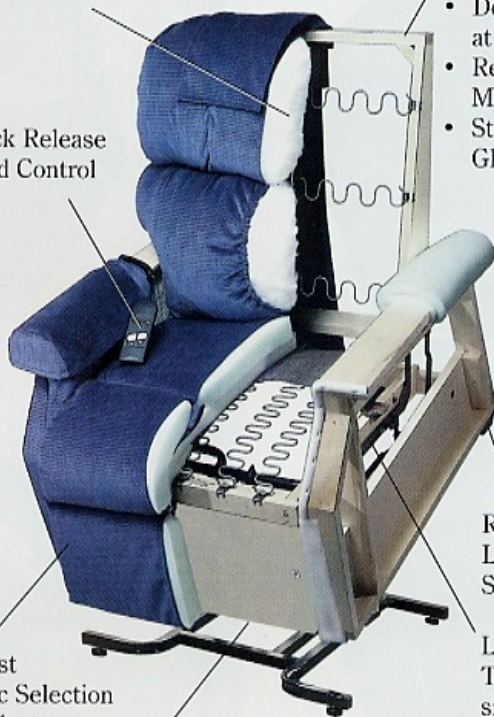

Four Large Adjustable Levelers

Northern Maple Wood

- Double Doweled at Stress Points
- Reinforced Mitre Blocks
- Stapled and Glued

Rear Landing Legs for Extra Stability

Long Lasting Torsion Suspension System for Incredible Comfort

## Custom Sizing...

One size doesn't fit all with Golden Technologies seat lift chairs.

## Safety System

Battery Backup System

Batteries not included.
