

RESISTS STAINS

LIQUID BARRIER

ANTIMICROBIAL

Have peace of mind with HIGH PERFORMANCE FABRIC

NANOTEX is the first high performance technology that builds permanent spill and stain resistance into the fiber structure of the fabric. The performance design of nanotechnology bonds with fabrics rather than coating them for an unmatched superior protection.

DURABLOCK LIQUID BARRIER (Nanotex + Durablock) combines to create a permanent stain protection with a breathable barrier to protect any upholstery when exposed to liquid. This unique combination is easily maintained with any cleaner. The 100% polyester backing will extend the life of your fabric, ultimately lowering or even eliminating replacement costs!

BIOAM ANTIMICROBIAL PRODUCT PROTECTION (Nanotex + BioAm) controls the microorganisms that cause odors, stains, mold, and mildew. This combination offers antimicrobial protection so that fabrics become resistant to bacterial growth! When Nanotex and BioAm are paired with Durablock liquid barrier – you will have the highest in performance fabrics.

These three characteristics combined create the ultimate in high performance fabrics!
