

RESISTS STAINS

LIQUID BARRIER

ANTIMICROBIAL

Have peace of mind with HIGH PERFORMANCE FABRIC

RESISTS STAINS

This high performance technology builds permanent spill and stain resistance into the fiber structure of the fabric. This stain resistance process bonds with fabrics rather than coating them for unmatched superior protection.

LIQUID BARRIER

A breathable barrier is added to the back of the fabric to protect upholstery when exposed to liquids. This barrier combined with the stain resistance will help extend the life of your fabric and foam.

ANTIMICROBIAL

Antimicrobial protection controls the growth of microorganisms that cause odors, stains, mold and mildew.

These three characteristics combined create the ultimate in high performance fabrics!
